## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-36, drawn to a method of identifying compounds capable of inhibiting fibronectin-mediated processes, classified in class 435, subclass 7.1.
- II. Claims 37-39, drawn to a method of identifying receptor-ligand pairs, classified in class 436, subclass 501.

The inventions are distinct, each from the other because of the following reasons:

The method of Group I is not related to the method of Group II. The methods require different reagents and different method steps, and have different goals and different outcome measures.

Because these inventions are distinct and/or unrelated for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the searches required for the different groups are different from each other, restriction for examination purposes as indicated is proper.
